70% longer wear ring length achieving an improvement in bearing performance compared to CY3B.  
A special resin Lub-retainer is installed on the dust seal to achieve idea lubrication on the external surface of the cylinder tube.  
By using a Lub-retainer,the minimum operating pressure is reduced by 30%.  
The mounting dimensions are the same as CY3B series.

Double Acting Operating Principle

Single Acting Operating Principle

### Operating Principle and Condition

#### CCW

Input the compressed air from the A, the left and right plungers move reversely, the output pinion rotates counter-clockwise, and the air at the sides of the both plungers exhausts from B.

#### CW

Input the compressed air from the B, the left and right plungers move to the center, the output pinion rotates clockwise, and the air between the two plungers exhausts from A.

#### CCW

Input the compressed air from the A, the left and right plungers move reversely, the output pinion rotates counter-clockwise, and the air at the sides of the both plungers exhausts from B.

#### CW

When it is out of air or power, the two plungers move to the center under the spring action, the output pinion rotates clockwise

### Operating Condition

#### 1. Operating Media

Dry and clear air, or the non-corrosive gases  
The maximum particle diameter must less than 40um

#### 2. Air Supply Pressure

The minimum supply pressure is 2.5Bar  
The maximum supply pressure is 10Bar

#### 3. Operating Temperature

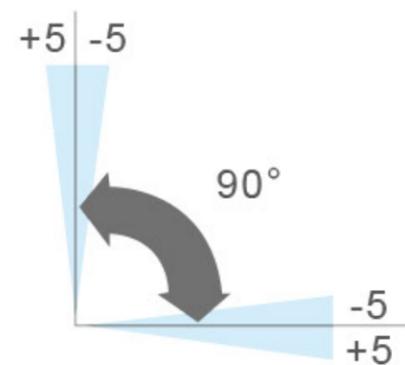

Standard: -20°C ~+80°C  
Low temperature: -35°C ~+80°C (can be customized)  
High temperature: -15°C ~+150°C (can be customized)

#### 4. Travel Adjustment

TYPE: Double acting pneumatic actuator

The suggested safe factor for double acting actuators under normal working conditions is 20%~30%.

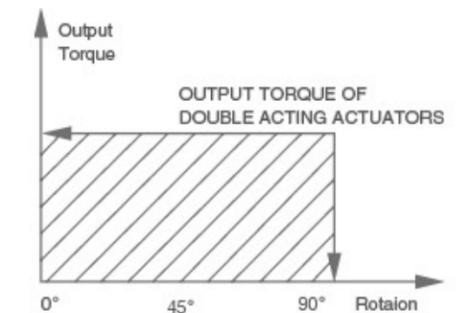

Example:

The torque needed by valve=100 Nm

The torque considered safe factor=100 (1+30%)=130 Nm

Air supply pressure=5Bar

According to the above table, we can choose the minimum model is XAT-105DA.

**Air source treatment units**

XCPC produce different standards of air source treatment unit(short as FRL), which include air filter, regulator, lubricator. They are offered as separation or combination, auto drain is available for some models. XCPC is one of the leading factory in this area for 17 years, with high reputation in domestic and international market.

### XOC Series Air Source Treatment Unit

XOC-MINI

The XOC consisted of XOFR and XOL, each unit can be ordered separately.

The XOF with water separator cleans the compressed air of fluid oil, condensation and dirt. Particles. For special application, the standard 40µm filter element may easily be replaced by a 5µm filter element.

The XOR maintain inputting constant operating pressure despite fluctuation in line pressure and the amount of air consumed. The proportional lubricator adds a regulated quantity of oil to the filtered air. The oil-mist content proportional to the flow and oil can be added during operation. The oil drop rate is controlled by the adjustable bolt. Normally, 1to 12 drops/1000L of the air is sufficient

### XOU Series Air Source Treatment Unit

XOU-MINI

The XOU consisted of XOFR and XOL, each unit can be ordered separately.  
 The XOF with water separator cleans the compressed air of fluid oil, condensation and dirt. Particles. For special application, the standard 40µm filter element may easily be replaced by a 5µm filter element.  
 The XOR maintain inputting constant operating pressure despite fluctuation in line pressure and the amount of air consumed. The proportional lubricator adds a regulated quantity of oil to the filtered air. The oil-mist content proportional to the flow and oil can be added during operation. The oil drop rate is controlled by the adjustable bolt. Normally, 1 to 12 drops/1000L of the air is sufficient

### XOL Series Lubricator

XOL-MINI

The direct constant-density lubricator add regulatd quantity oil to the compressed air.A valve maintains oil mist content proportional to the compressed oil flow.

The pressure drop that occurs when the air flow through a sight feed oil cup delives oil from the bowl to the sight oil indicator.The drop of the oil flows into the air channel when it is atomized.

The oil drop rate is controlled by means of the regulating screw.Normally,1 to 12 drops/1000L of the air is sufficient.

Features

This is a differential balanced valve automatically opens the air port fully when the downstream pressure is about 50% of the upstream pressure. Without a pilot, the upstream air flows downstream through the regulation needle. When an external or pneumatic solenoid signal is generated, the valve opens the main port to create full flow. It doesn't relieve the downstream circuit.

**Solenoid valves**

Solenoid valves are used for change directional of air flow, control by electricity. There are 3/2, 5/2 and 5/3 way/position as optional, and the port size from M5 to 1/2".XCPC never stop its step to improve the quality, 2 times life time, less friction inside the valve body and high dust prevention, the new type of solenoid valve is available now.

4V、3V Series Solenoid Valve,4A、3A Series Pneumatic Control Valve

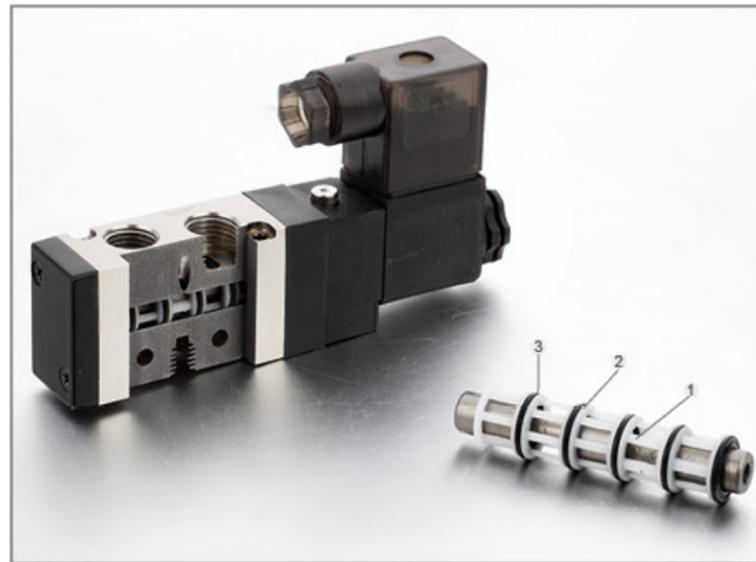

- Except the existing colours, now we have launched black valve body with laser printing model number.
- Other colours of body can be produced if order quantity meets our required.

Product instruction

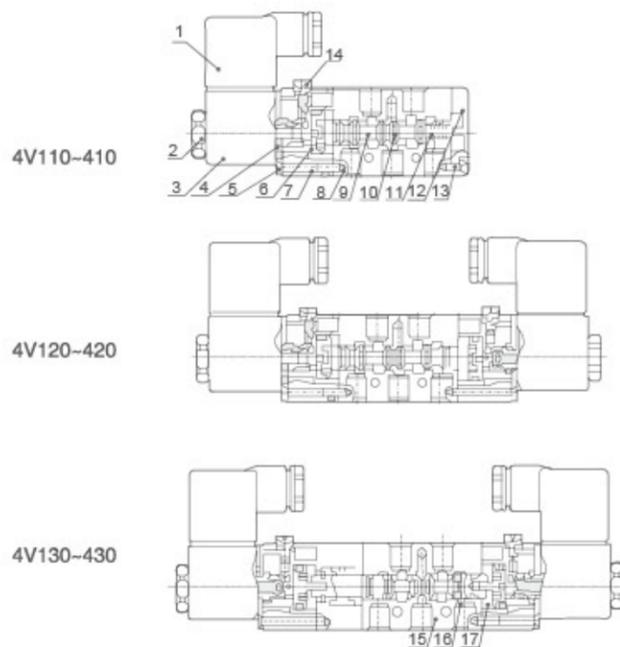

This solenoid valve is our new developed product. All the installation dimension is the same as 3V, 4V series, and the valve spindle material is still aluminum, but we changed the material outside valve spindle into POM (polyformaldehyde). Then it will be not only the seal-ring that operate separately, which will bring the new product two advantages:

If you need this new product, please add the word "new" (abbreviation "N" ) after the ordering code, for example: 4V210-08-N.

1. High dust prevention, air-proof
  2. One or twice lifetime than normals'
- 1 Spool:material aluminum 6061
  - 2 O-ring:material NBR
  - 3 White case:Material POM

Blind plate Operating Instructions:  
When base quantity is more than solenoid (pneumatic) valve quantity, can use blind plate to seal the redundant valve base temporary, and then change it if add extra solenoid (pneumatic) valve. Like this can expand system.

**Hand/Mechanical Valve**

The valve is controlled by human or machine, to switch the direction of air flow. These valves included hand pull, hand draw, button control, rotary and foot valve. Body is made from aluminum, machining by CNC center. XCPC used the high grade of material and imported machine to make all the details perfect.

Product instruction

The valve is unidirectional control element. When passing the valve, the working medium can only flow along a given direction. In operation, when the medium pressure direction changed, the valve functions to stop the return of the medium in the system. Therefore, the product is also called non-return valve.

## General Information About Solenoid Valve

Inner structure and categories of two way solenoid valves

### Direct acting solenoid valves

Including normal close style (N.C.) and normal open style(N.O.). The N.C. style solenoid valve stay close at power off condition. When poweron, the coil yields electricity-magnetic force, which exceed the spring force and hence pulls active armature approaching to static armature, the valve becomes open; when power off, the electricity-magnetic force disappear and the active armature go back to its original place by the spring force, the valve close. The N.O. style is just opposite. These valve are normally simple structure, dependable action, fast response, high, frequency and with ≤6mm small orifice size(N.O. style ≤4mm ).

### Diaphragm pilot solenoid valves

This style valve makes main valve and pilot valve together, when power on, the coil yields electricity-magnetic force pulls active armature approaching to static armature, the pilot valve open and control the main valve to open; when power off, the electricity-magnetic force disappear and with the gravity and spring force, the active armature close the pilot valve, which control the main valve to close. The N.O. style is just opposite. These valve are normally with bigger orifice size and ≤10Bar working pressure and with zero differential working pressure.

### Piston pilot solenoid valves

Similar with piston pilot solenoid valves, but supports for higher pressure and temperature,with ≥1 Bar differential working pressure.

- Flow of air is completely stopped upon disconnecting the tube and reinstated upon reconnecting the tube.
- Dual-passage mechanism allows the pressure source to be originated from either side of the pneumatic connection.
- Ideal for pneumatic applications where tubing connections are frequently re-arranged.
- Suitable for experimenting, testing, demonstration, and educating various pneumatic applications.

## Check Valves

### Feature

- Anti-directionality of airflow is maintained while the flow of air in the opposite direction is completely prevented.
- Constant input and output air pressure is achieved due to the controlled directionality of airflow.
- Suitable for the pneumatic applications under low operational pressure conditions.
